CLEVIR

The world wants to move to the cloud at blazing speed to improve productivity & flexibility inside and outside the office.

You should be able to work with what you have as well as all new applications and technology. Our solutions bridge these worlds.

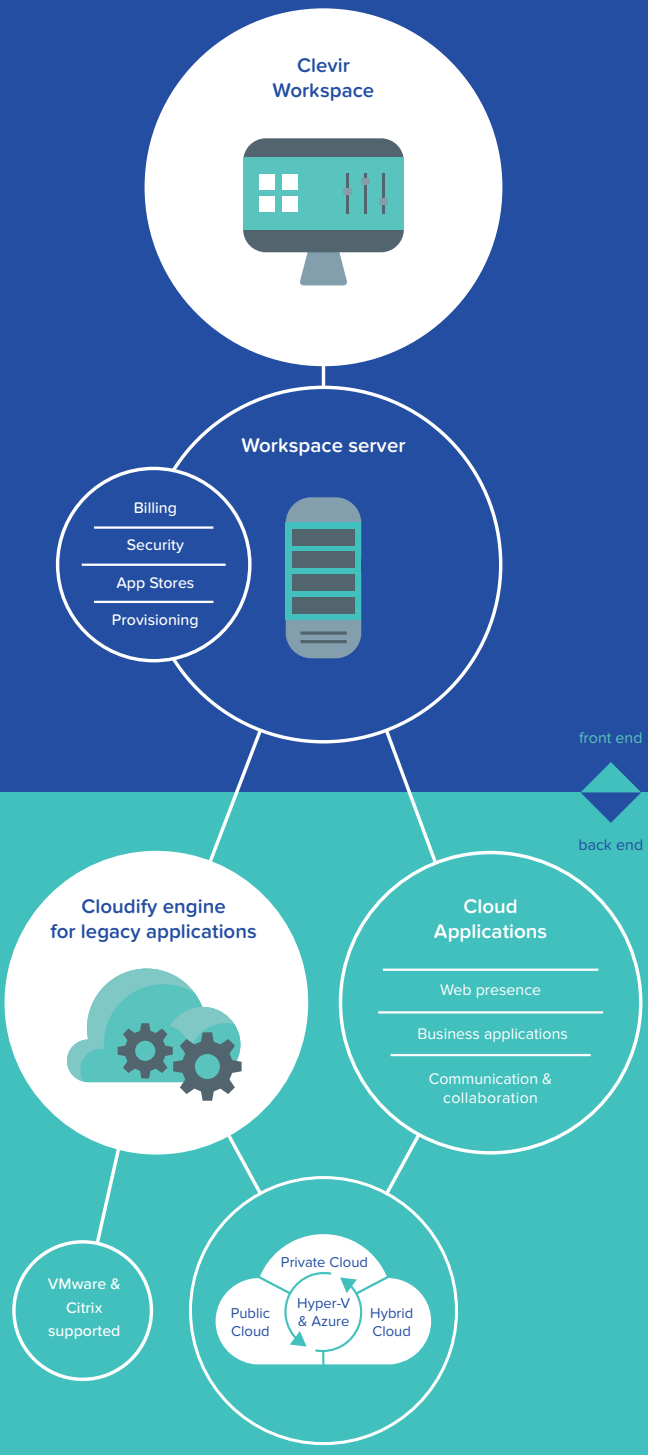
Simple, flexible access to all applications through a single screen from any device and from anywhere.

We believe in virtual workspaces, not desktops.

Our solutions

Clevir Workspace

We allow users access to virtually any application on any device, at any time. We ensure central delivery, management and security of company assets across devices and user groups.



Clevir Cloudify Engine

We cloudify any applications (new and legacy) through our virtualization engine which becomes accessible via the Clevir Workspace.

What does that mean for end-users?

Clevir offers easy and secure access to ALL applications through a single screen on any device.

Access cloud & non-cloud applications from a single user interface, which can be adapted and personalized.

Applications can be pushed to the Workspace based on end-user profiles set by an administrator.

Simple and easy to install, configure and use. Accessible from any device, anywhere, at any time.

Only Clevir allows your end-users to switch easily between, and move data in between (cut & paste), applications.

What does that mean for you as a Service Provider?

Clevir Workspace is the perfect vehicle to start offering cloud applications and cloudify legacy applications with minimal effort and low costs.

Offer new and unique managed services, and cross- & upsell to push new applications to your customers.

Improve utilization of the datacenter and profits. Clevir enables higher density, higher performance and more resilient workplaces.

Virtualization of client-server applications to become cloud applications without having to alter the user experience.

Quickly & easily deploy a complete set of business applications to any organization.

Clevir offers a migration path away from Citrix and VMWare to drastically lower your current licensing, hardware and implementation costs.

Full integration with Microsoft technology. Other back-ends also supported.
